

ONE-TIME SETUP (ONLY NEEDED ONCE, BY ANYONE ON THE TEAM)

- 1
- Go to **app.pagescms.org** and click "**Sign in with GitHub.**" Use the GitHub account that has access to the website's repository.
- 2
- The first time, you'll be asked to **install the Pages CMS app** on the repository (**Sahyadri-School/the-compass**). Approve it — this is a one-time step.

ADDING A NEW ISSUE (EVERY TIME)

- 1
- Open **app.pagescms.org** and click into the **the-compass** repository.
- 2
- Click "**Magazine issues**" in the sidebar.
- 3
- Click the **" + Add "** button.
- 4
- Fill in the form (see the panel on the right — every field has a short explanation right there in the real form too).
- 5
- Click **Save**.
- 6
- That's it. The new issue goes live on the website automatically — usually within a minute or two. Refresh the site to check.

Order doesn't matter. You can add issues in any order — the website automatically works out which issue is the newest and shows that one as "current."

No cover image needed. The site takes the cover — and a click-through preview of the contents pages — straight from your PDF when it publishes, so there's nothing extra to upload.

MAGAZINE ISSUES > ADD NEW

Volume number

Issue number

e.g. 3

e.g. 4

Month published

Year published

e.g. October ▼

e.g. 2026

Issue code

e.g. 3-4

Volume, a dash, then Issue number.

Upload the issue (PDF)

↑ Click to upload PDF

Save

† A simplified sketch of the form — the real one on app.pagescms.org will look a little different but asks for the same things.

COMMON QUESTIONS

What if I make a mistake after saving?
Just open the same issue again in Pages CMS, fix the field, and click Save — it updates the live site the same way.

Can more than one person do this?
Yes. Anyone with access to the GitHub account can sign in to Pages CMS and add issues — no special "editor" role needed.

The issue isn't showing up on the site yet — what now?
Give it a couple of minutes and refresh. If it still isn't there after five minutes, check with whoever set up the site — something may need a quick look.

Do I need to know GitHub or coding?
No. Everything above happens in the Pages CMS web form — you never need to open GitHub itself.
